Art Unit: 1621

DETAILED ACTION

The objection to the specification is withdrawn.

The outstanding prior art rejections are withdrawn since they do not teach or provide a reason for oxidizing methanol or ethanol with the recited catalysts.

The following is a new ground of rejection:

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mamoru et al. Journal of Catalysis, 77, 279-288 (1982) (Mamoru) in view of Kirk Othmer (of record).

Mamoru teaches Fe-Mo catalysts for the oxidation of methanol to its oxidative products, see Table I. Although Mamoru fails to teach a supported catalyst, Kirk-Othmer specifically teaches the recited supported catalysts, and benefits thereof, and therefore, use of a supported catalysts would have been prima facie obvious since Kirk Othmer teaches supported catalysts to such an extent that their use would have been provided a predictable result. With regard to those embodiments requiring oxidation of

ethanol, a predictable result would have been expected using the catalysts taught by Mamoru and Kirk Othmer, given the similar starting material.
